

Multiple database query while within a query itself

Or: how's this for circular logic?

2006-12-19 Chad Edge <chadedge@gmail.com>

```

SELECT
    li.lightboxID,
    li.imageID,
    lb.id,
    lb.lightbox_name,
    it.Record_ID,
    it.Filename,
    it.Path
FROM
    CE_lightbox_images li
INNER JOIN
    CE_lightbox lb
ON
    lb.id = li.lightboxID
INNER JOIN
    Item_table it
ON
    li.imageID = it.Record_ID
WHERE
    lb.id = 'XXXXXX'
  
```

The problem is this: how do I select the data from the Item_table based on the database written in the databaseID column **while** in the query itself?

<u>lightboxID</u>	<u>imageID</u>	<u>databaseID</u>	<u>id</u>	<u>lightbox_name</u>	<u>Filename</u>	<u>Path</u>
132	43406	1	132	new lightbox	DAN062LH.JPG	...
132	5345	2	132	new lightbox
132	9531	2	132	new lightbox
132	7601	2	132	new lightbox
132	13709	2	132	new lightbox
